Refrigerante R32

GWP

675

Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to <sup>675</sup>. This means that if 1kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be <sup>675</sup> times higher than 1kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.
